

The whole business, one picture

01

Six stages. A job enters at Enquiry and leaves as cash in the book. Every stage feeds the reports.

Solid arrows are the path a job takes. Dashed arrows mean the stage feeds the reports without the job moving on. Nothing on pages 2-7 is a separate app - it is the same entry seen from a different screen: record it once and Production, Stock, Tipper, Salary, Client and Cash all move together.

Stage 1 - Set up the factory (done once, changed rarely)

02

Everything the daily screens offer as a dropdown or fill in as a rate is defined here first.

Stage 2 & 3 - From enquiry to a live order

03

Two ways in. Both end at the same place: a customer with an order and a status.

ROUTE A - the recorded call, handled for you

ROUTE B - the notebook, typed once

Status moves itself as deliveries are recorded - or tap the chip to set it by hand.

Stage 4 - Making the bricks

04

One production entry moves wages, stock and raw material together.

DIES (moulds) - counted alongside production

Bricks pressed between the day a face goes in and the day it comes off are that side's output, so the Dies report can show cost per 1000 bricks for each face. Half the purchase price is charged to each side.

Stage 5 - Loading, transport and delivery

05

The busiest screen: one entry, six things updated. The OWN / RENTED flag decides how the money splits.

Why the split: an own tipper earns the trip money AND charges the brick business for the haul, so the truck can be judged on its own - but only one real payment exists, so only one cash entry is written. A rented tipper is a genuine debt to the vendor, so it waits as a payable until the advance or balance is actually handed over on the AVM page. Either way the same rupee is never counted twice.

Stage 6 - Where all the money meets

06

Every screen writes to one ledger. Nothing has to be re-entered in the cash book.

Reading it back - reports, tasks and who sees what

07

The last stage: turning the day's entries into something you can check, send or act on.
